

# Formal Methods in Software Engineering

2024/25

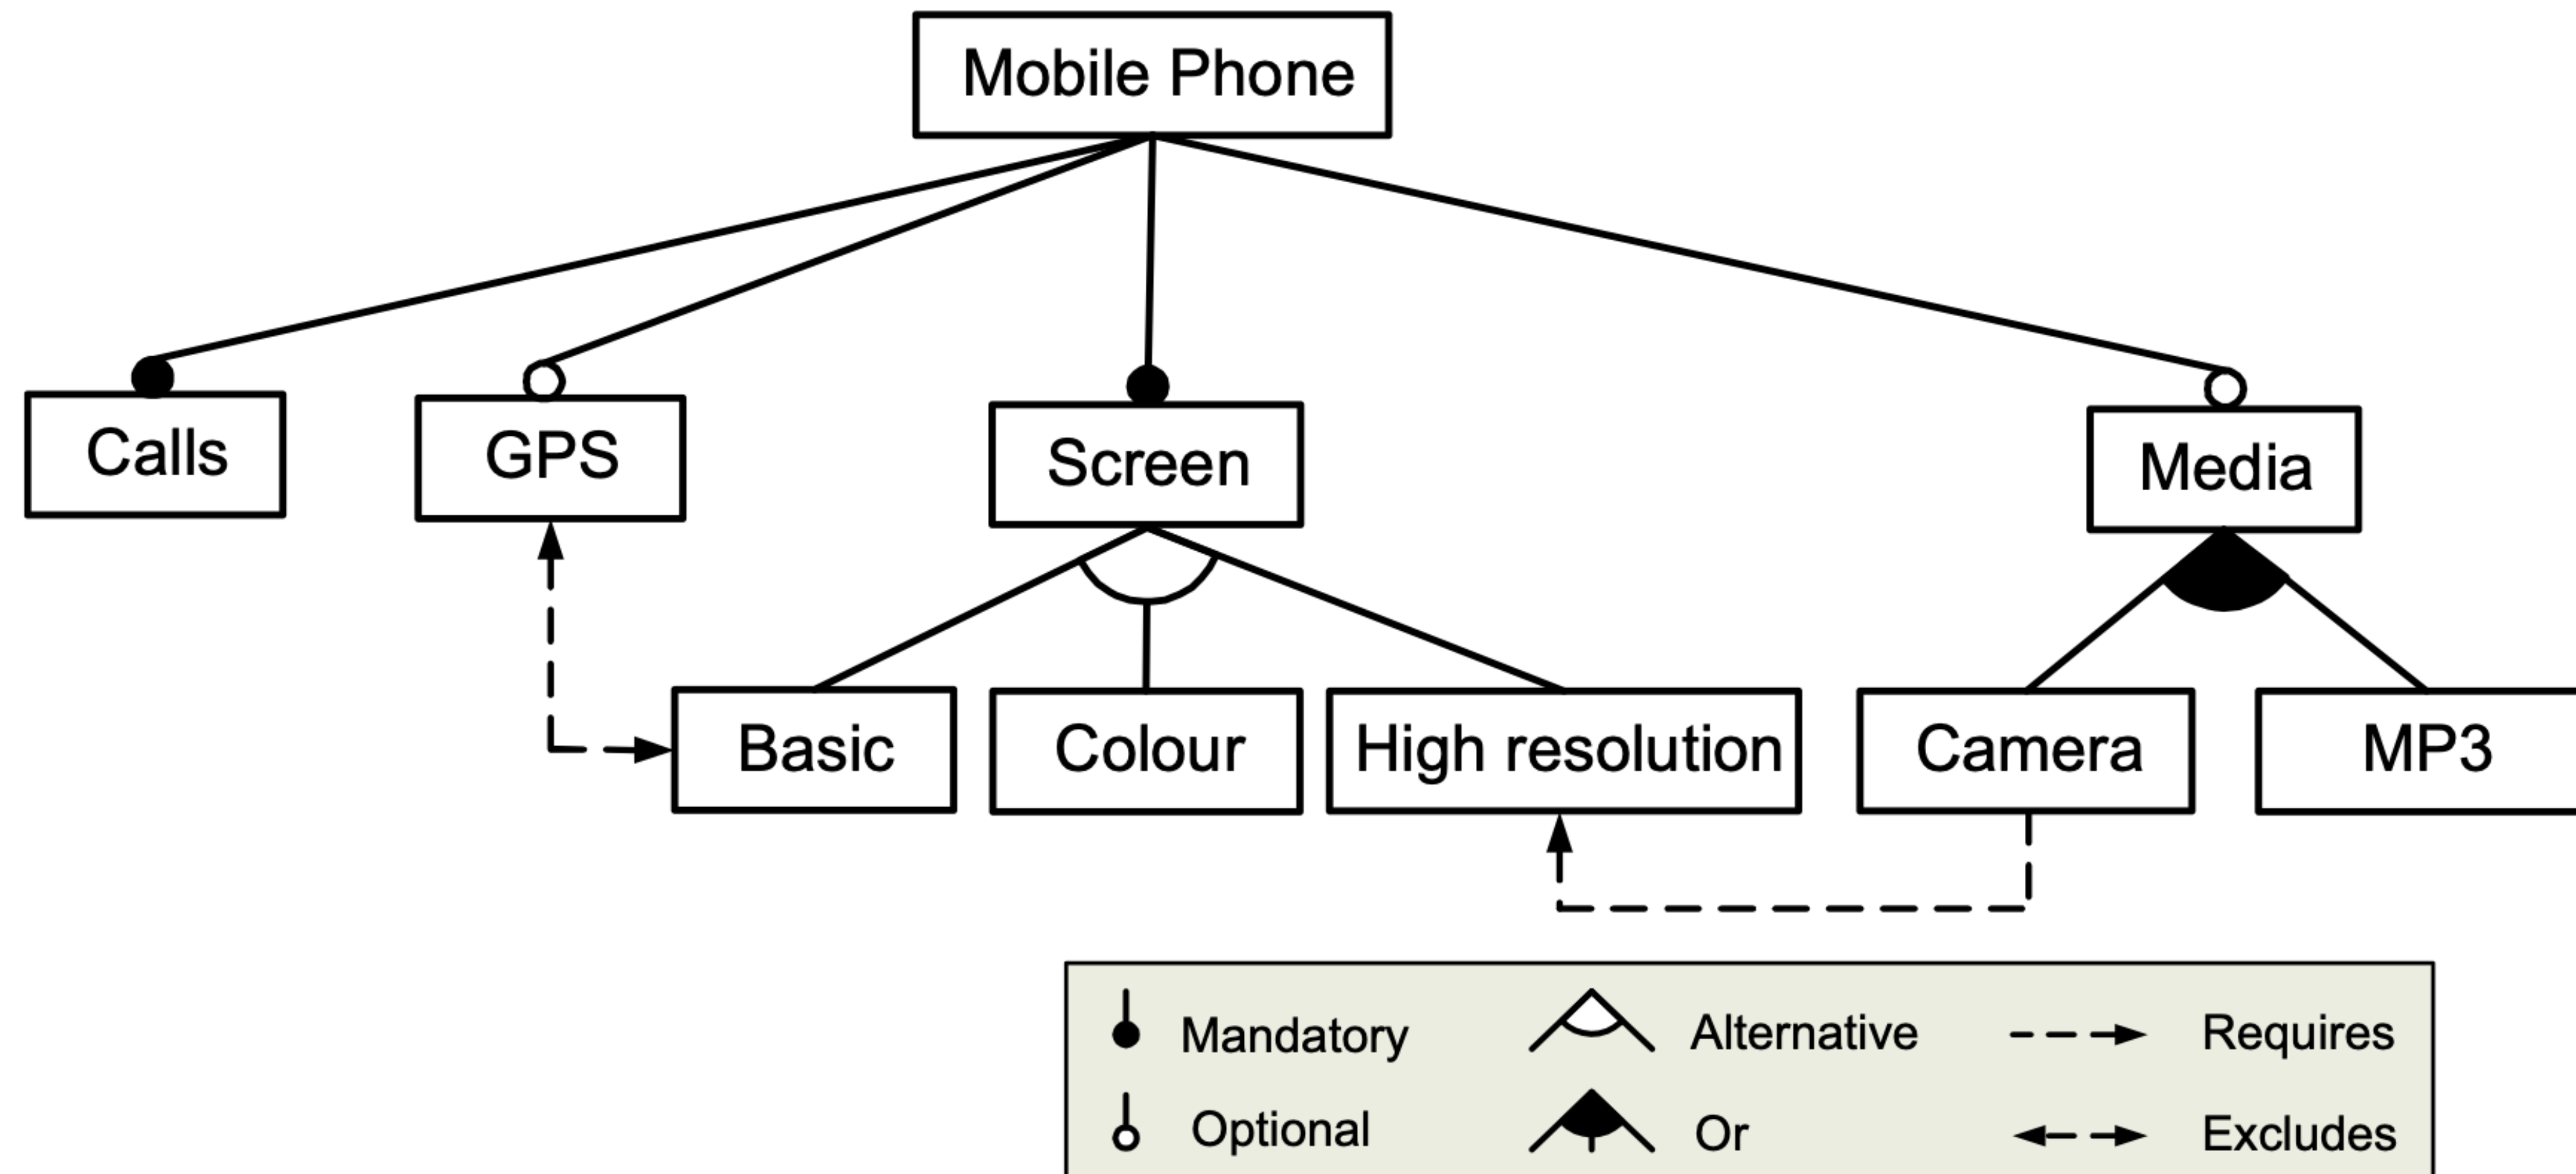

# (Lightweight) formal methods

- Rigorous approaches
- Formal languages (logics)
- Automatic proof techniques
- High-level and user-friendly tools

# Applications

- Variability modelling
- Domain modelling
- Data-structure design
- App design
- Program testing
- Program verification

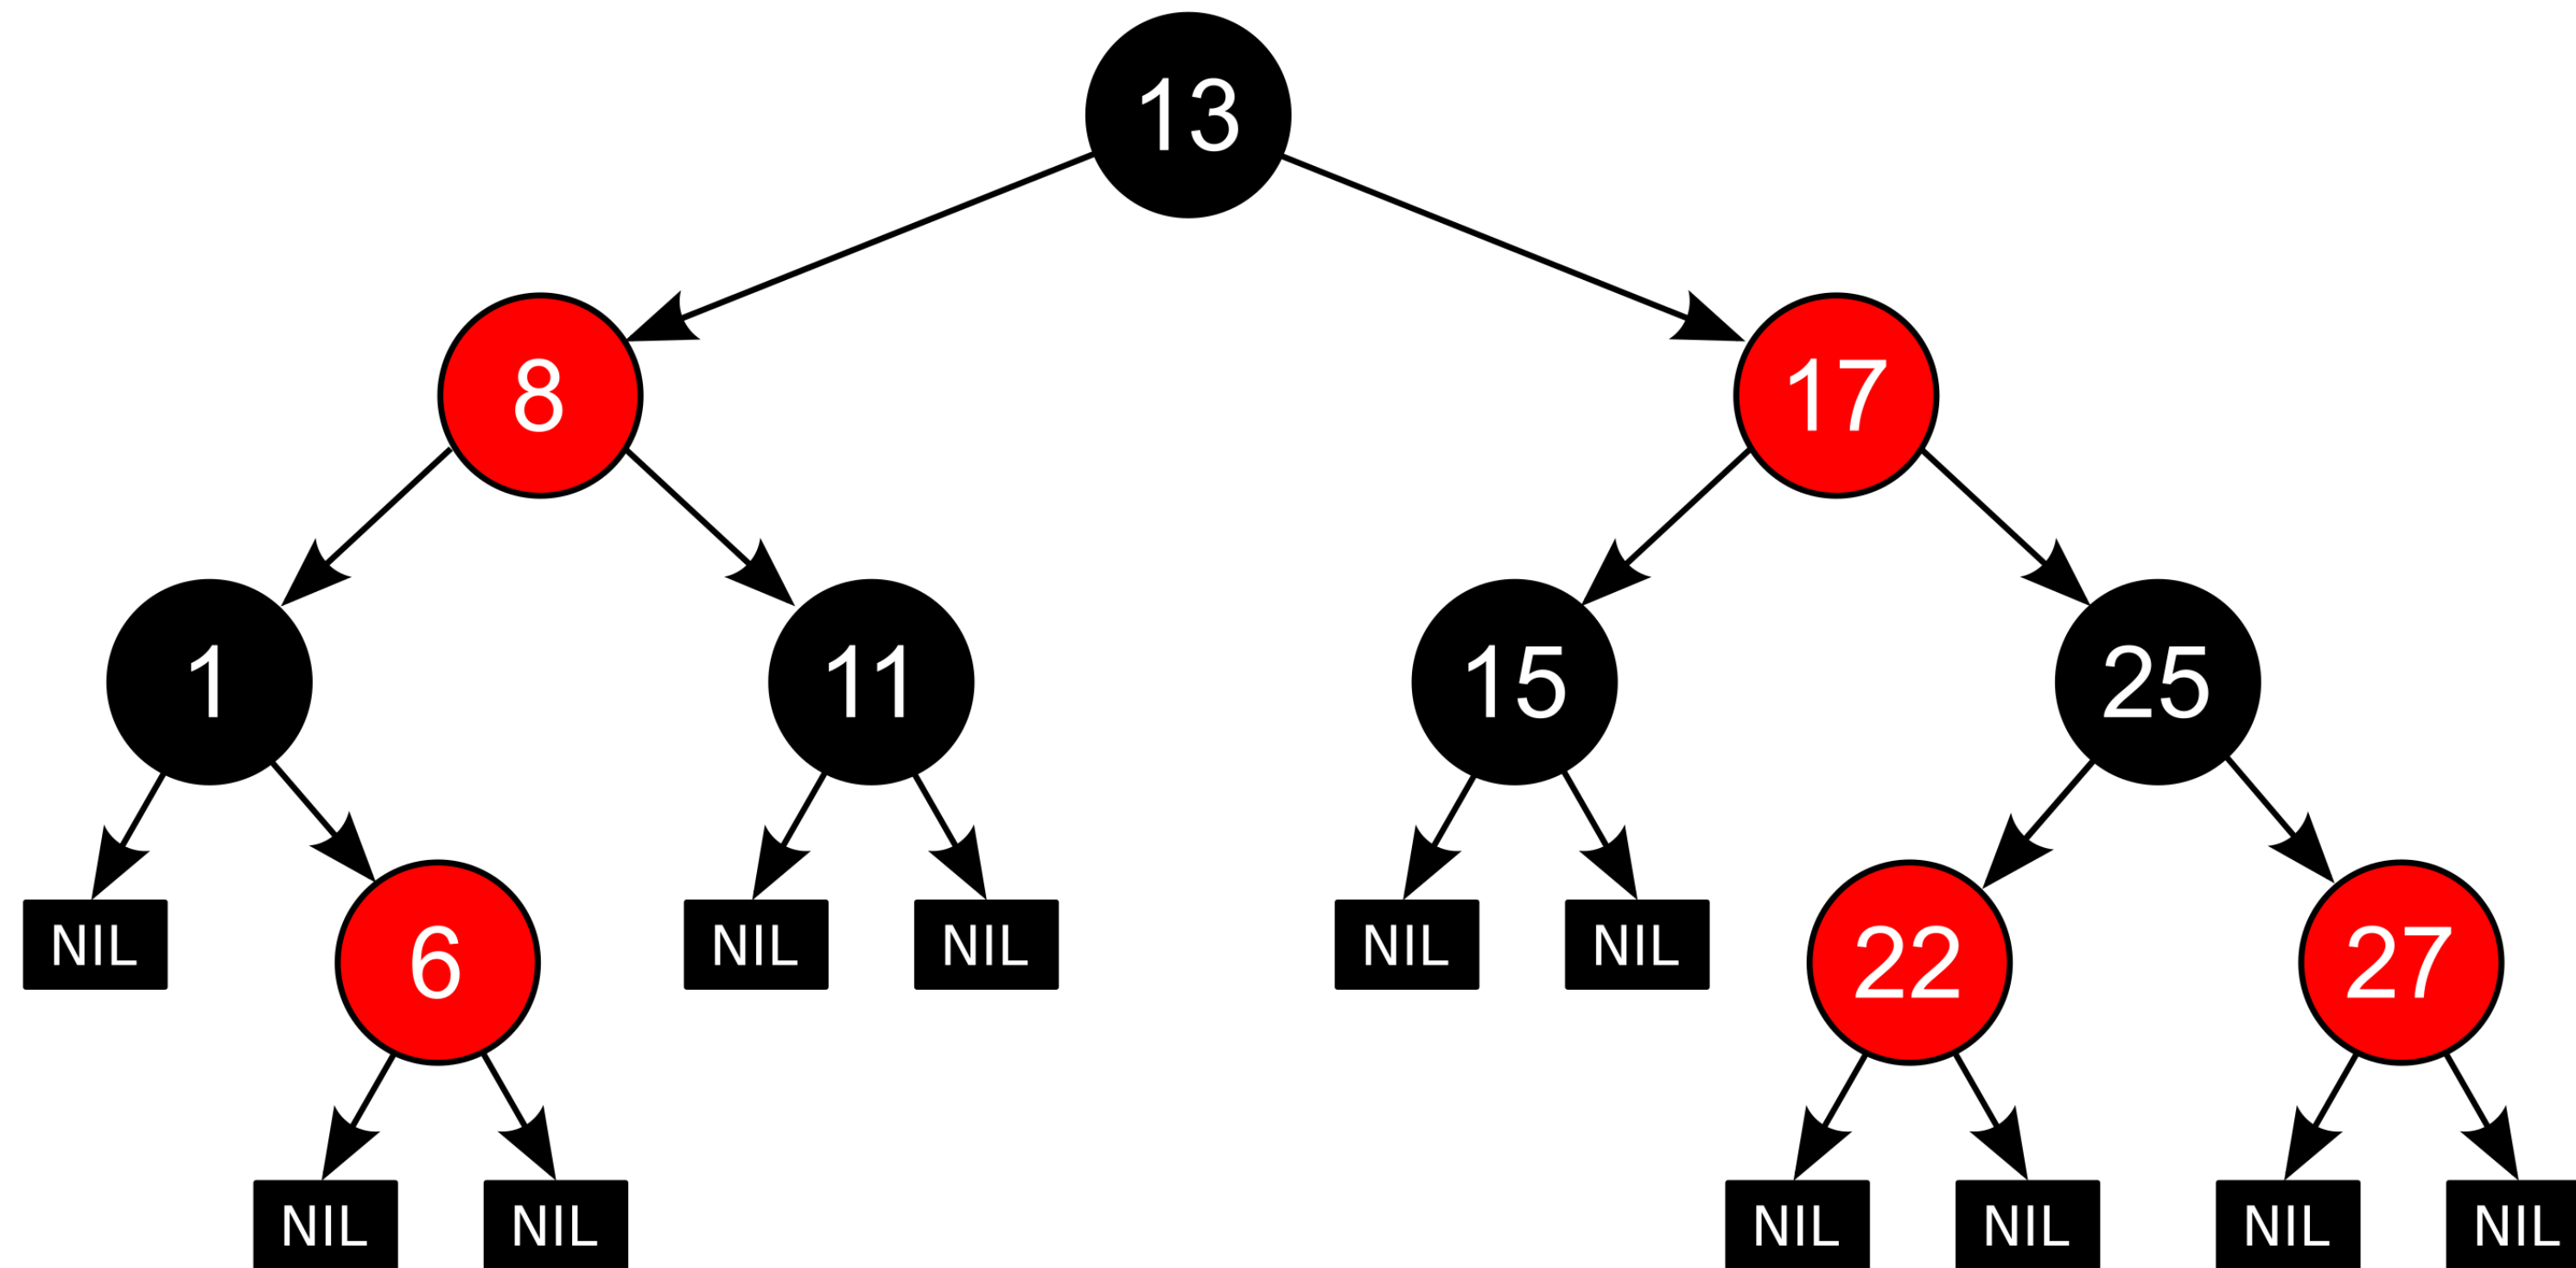

# Variability modelling

# Domain modelling

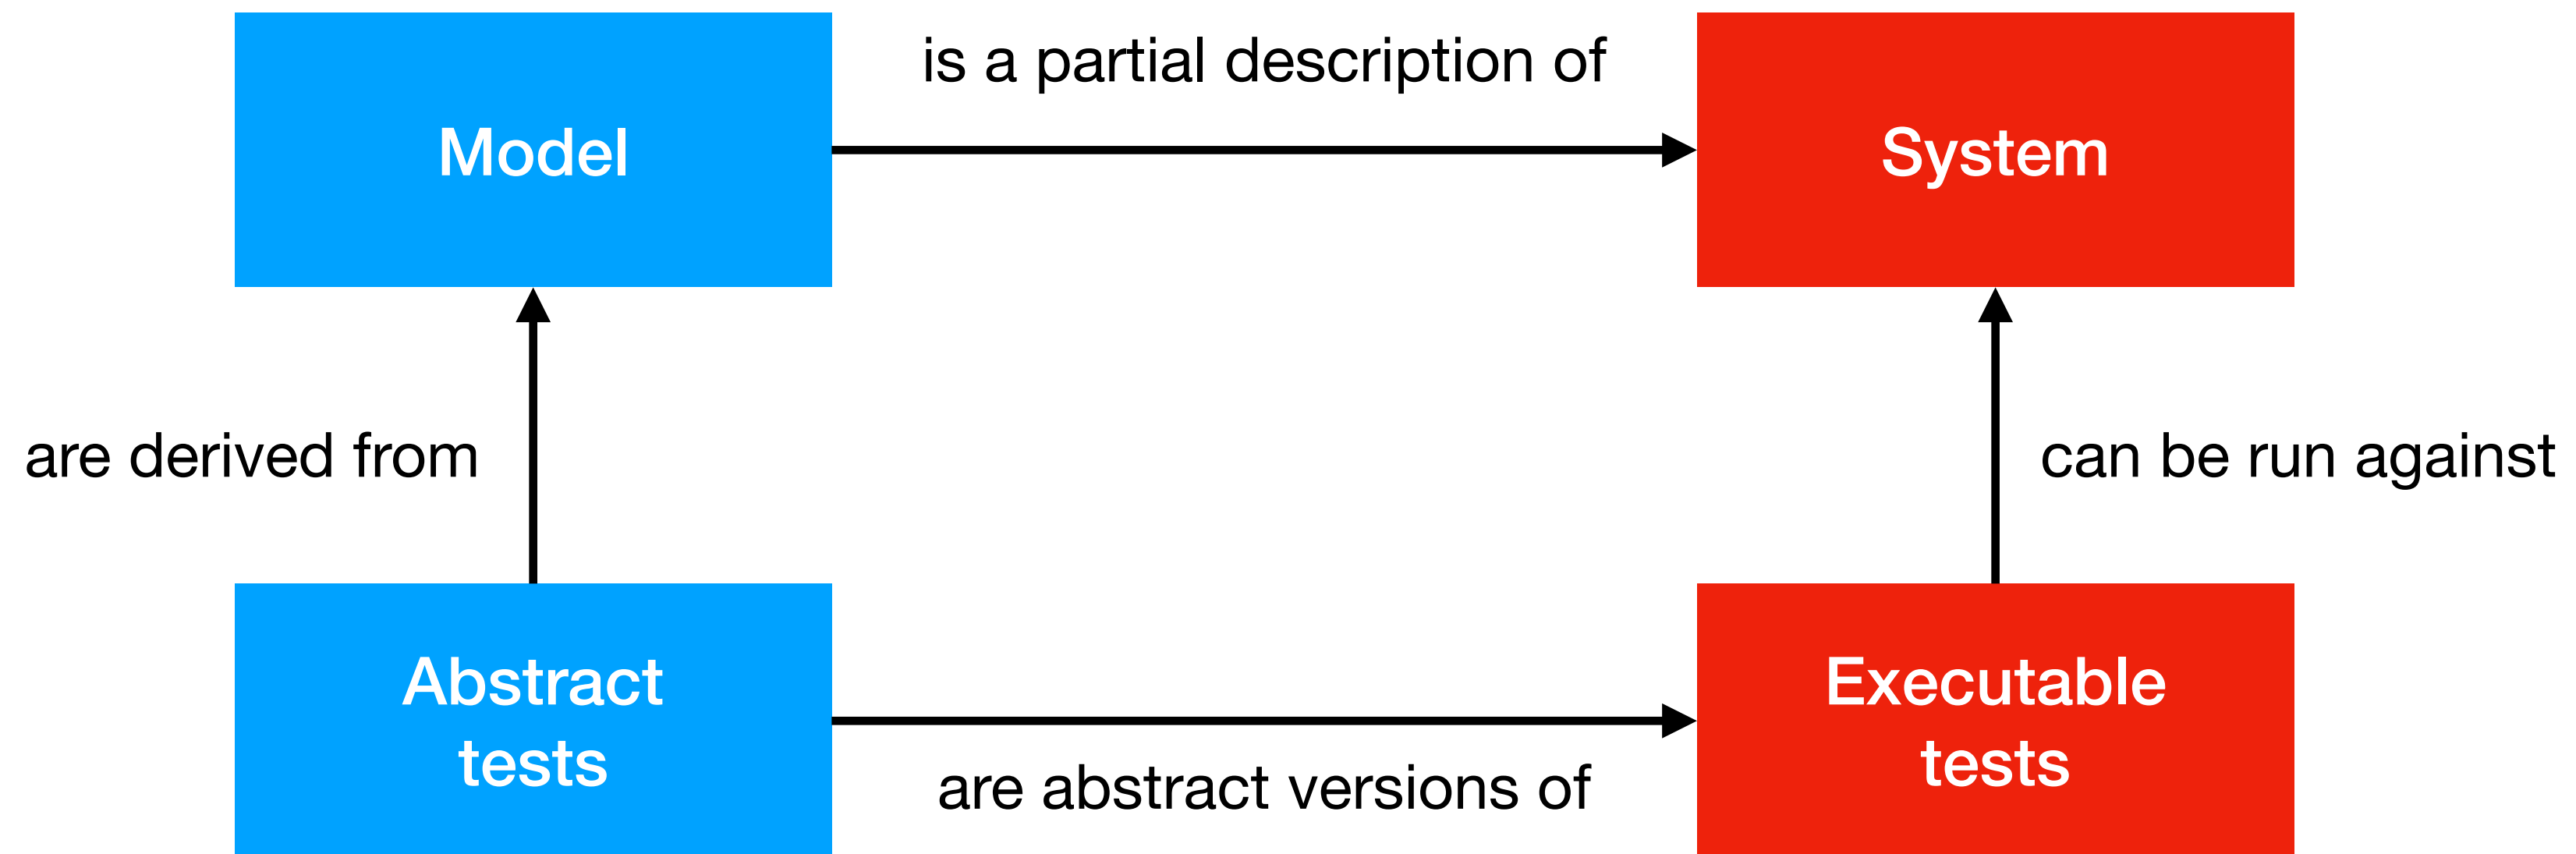

# Data-structure design

# App design

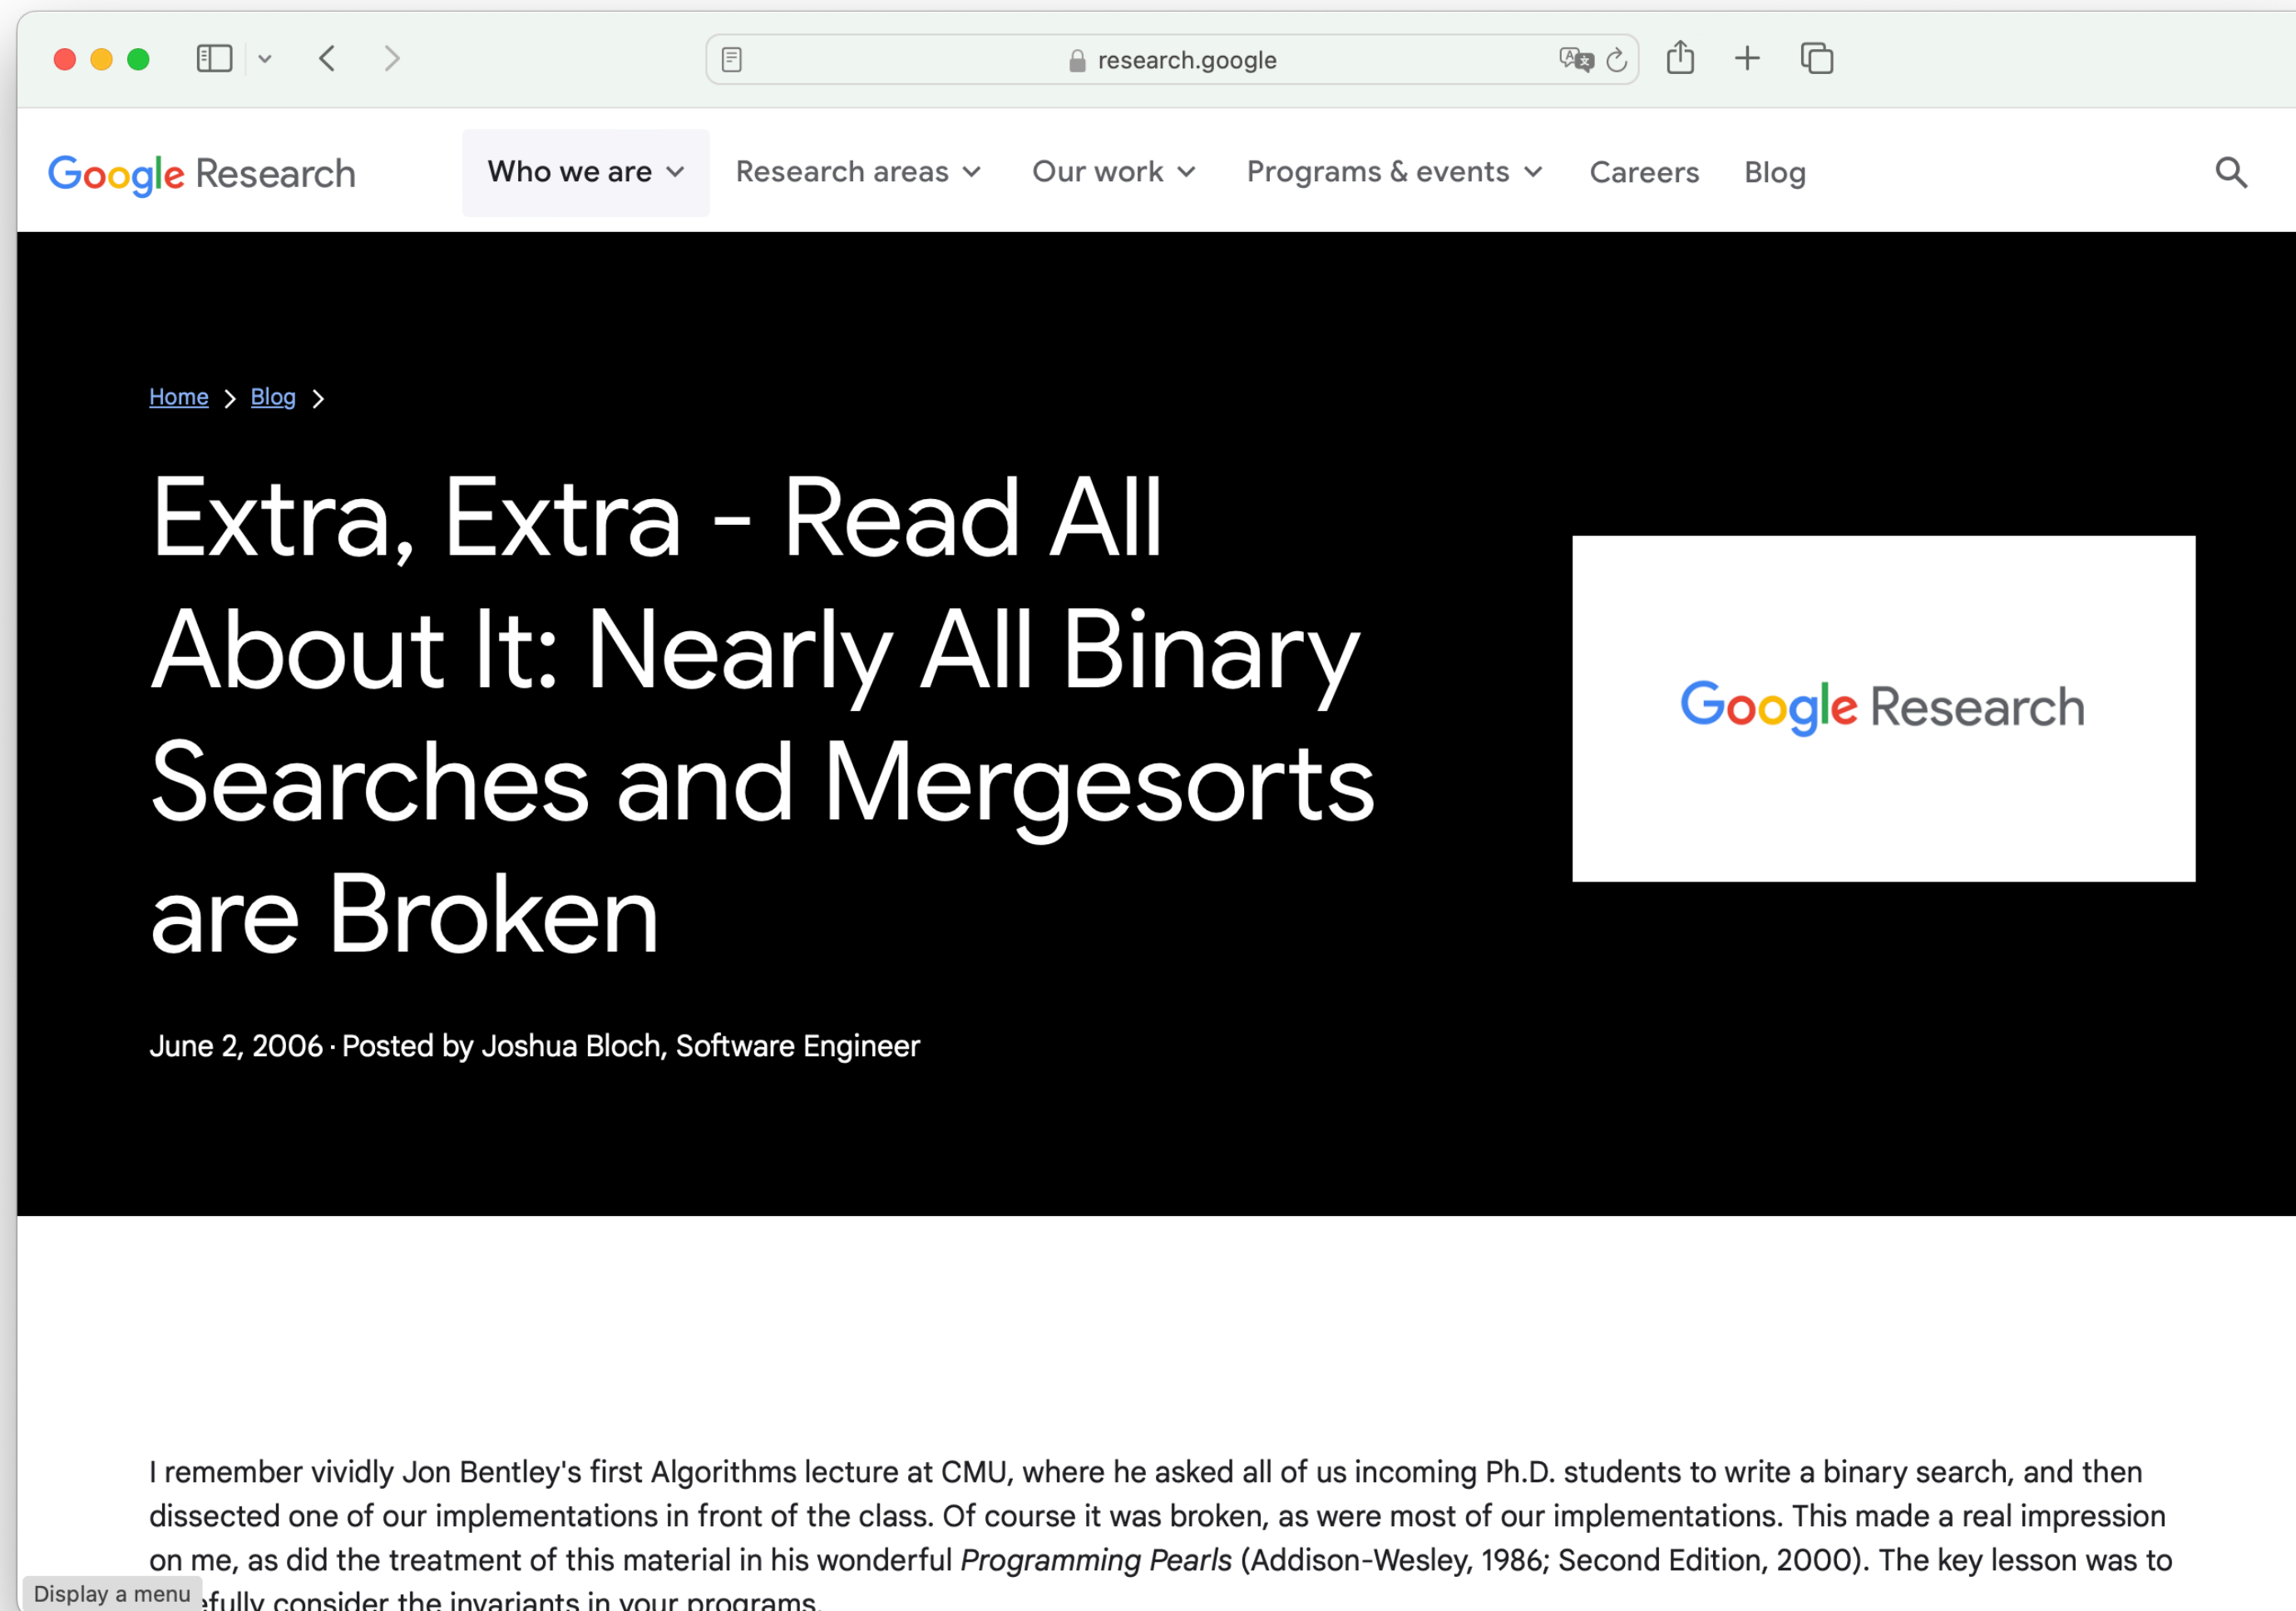

# Program testing

# Program verification

The image shows a screenshot of a web browser displaying a Google Research blog post. The browser's address bar shows 'research.google'. The navigation menu includes 'Who we are', 'Research areas', 'Our work', 'Programs & events', 'Careers', and 'Blog'. The main content area has a dark background with the title 'Extra, Extra - Read All About It: Nearly All Binary Searches and Mergesorts are Broken' in large white text. Below the title, it says 'June 2, 2006 · Posted by Joshua Bloch, Software Engineer'. To the right of the title is a white box with the Google Research logo. At the bottom, the start of the article text is visible: 'I remember vividly Jon Bentley's first Algorithms lecture at CMU, where he asked all of us incoming Ph.D. students to write a binary search, and then dissected one of our implementations in front of the class. Of course it was broken, as were most of our implementations. This made a real impression on me, as did the treatment of this material in his wonderful *Programming Pearls* (Addison-Wesley, 1986; Second Edition, 2000). The key lesson was to fully consider the invariants in your programs.'

## Extra, Extra - Read All About It: Nearly All Binary Searches and Mergesorts are Broken

June 2, 2006 · Posted by Joshua Bloch, Software Engineer

I remember vividly Jon Bentley's first Algorithms lecture at CMU, where he asked all of us incoming Ph.D. students to write a binary search, and then dissected one of our implementations in front of the class. Of course it was broken, as were most of our implementations. This made a real impression on me, as did the treatment of this material in his wonderful *Programming Pearls* (Addison-Wesley, 1986; Second Edition, 2000). The key lesson was to fully consider the invariants in your programs.

# Lecturers

- Alcino Cunha (MAC)
  - [alcino@di.uminho.pt](mailto:alcino@di.uminho.pt)
  - Ed7 2.15
- Jorge Sousa Pinto (JSP)
  - [jsp@di.uminho.pt](mailto:jsp@di.uminho.pt)
  - Ed7 2.28

# Program

- Computational logic (MAC + JSP)
- Formal software design with Alloy (MAC)
- Deductive program verification with Why3 (JSP)

# Schedule

11h	TP2 (JSP) CP2 2.06	TP4 (MAC) CP1 0.17
12h		
13h	T (MAC + JSP) CP1 0.08	
14h		
15h	TP1 (JSP) CP2 2.02	TP3 (MAC) Ed7 1.10
16h		
17h	TP5 (MAC) CP1 2.23	

# Assessment

- Continuous assessment
  - Written test (80%) - 14 Dez
  - Practical exercises (20%) - 27 Set, 18 Out, 1 Nov, 29 Nov (e-learning)
- Assessment by examination
  - Written exam (100%) - 20 Jan
- Final grades above 18 require a “defence” with a small project/challenge
